INVESTIGATION OF SORPTION OF ACETYLENE.
[1961] 10p. 19 refs.

Trans. of Zhurnal Obshchei Khimii (USSR) 1942, v. 12,
p. 296-305.

DESCRIPTORS: *Acetylenes, Cellulose, Esters, Cata-
lysts, Stearates, Adsorbents.

The dynamic activity of various sorbents and certain
catalysts with respect to acetylene have been estimated,
and on the basis of the data obtained the unsuitability of
the following substances established for gas mask pro-
tection against acetylene: various commercial carbons,
gels, impregnated charcoals and hopcalite. The retain-
ing capacity of various impregnated carbons with
respect to acetylene is insignificant. The sorption
isotherms have been investigated for acetylene on
ethyl n-heptadecyl ketone, cellulose and some esters

DESCRIPTORS: *Activated carbon, Synthesis,
*Chlorine, Adsorption, Vapors.

Preparation of active carbons from various raw materials by carbonization at 750° and 950° was investigated. Sorption of vaporized and dissolved substances by chlorine-activated carbons was studied. Marked sorption activity of chlorine-activated carbons was established with respect to vapors, as well as dissolved substances, which exceeds in some cases the activity of steam-activated commercial carbons. In this work we obtain an expression for the intensity
of the magnetic field of an infinite rectangular cur-
rent-carrying conductor located in an ideally con-
ducting cylindrical pipe which has a longitudinal cut.
The location of the conductor and the dimensions of
the cut are arbitrary. We study the problem of the
